Publication Notice

This public edition presents the vision, product direction and current development status of the project. It is not an offer to sell securities, tokens or investment products; it does not promise returns; and it does not represent planned services as active. Product launches remain subject to security testing, legal review, provider approval, operational readiness and applicable law.

01 / EXECUTIVE SUMMARY

Baron Cryptos Escrow is a proposed web and Telegram-based platform designed to reduce fraud and counterparty risk in online trade. Buyers and sellers define terms, lock value, confirm delivery and release or refund funds under documented rules. Disagreements enter an evidence-led dispute process.

02 / PRODUCT EXPERIENCE

The proposed platform combines a fast Telegram workflow with a responsive website for onboarding, dashboards, evidence submission, transaction records, administration and reporting. Primary users include freelancers, online merchants, service providers, small businesses and cross-border traders.

03 / PAYMENT RAILS

USDT on TRON is the first test environment. Bitcoin, mobile money and approved merchant payment options are planned only after provider approval, security testing, legal review and operational readiness. No unaffiliated payment provider is represented as a partner.

04 / FEE MODEL

A 2% core platform fee is proposed. Blockchain network costs, payment-provider charges and extraordinary dispute costs must be disclosed separately before confirmation. Final pricing will depend on production operating costs and compliance requirements.

05 / SECURITY AND CONTROLS

Deposits must be verified through authoritative blockchain data or authenticated provider callbacks, never screenshots. Controls include wallet matching, role-based access, audit logs, transaction monitoring, evidence retention, secure key management and incident response.

06 / DISPUTES

Transactions can be released, refunded or escalated. Dispute decisions should be based on agreed terms, verified payments, delivery evidence and a documented decision trail. Clear response windows and appeal rules will be defined before production use.

07 / READINESS ROADMAP

Current status is a testnet MVP and portfolio demonstration. A controlled pilot requires security review, legal structure, compliance policies, merchant approvals and production testing. Regional expansion follows proven operations and regulatory readiness.
