Publication Notice

This public edition presents the vision, product direction and current development status of the project. It is not an offer to sell securities, tokens or investment products; it does not promise returns; and it does not represent planned services as active. Product launches remain subject to security testing, legal review, provider approval, operational readiness and applicable law.

01 / EXECUTIVE SUMMARY

Baron Web3 Marketplace connects Web3 projects with creators, communities, agencies, developers, auditors, designers and specialist companies in one structured global environment. The platform is designed to replace fragmented discovery, private-message negotiation and disconnected project management with credible profiles, comparable services, proposals, orders and professional workspaces.

02 / THE PROBLEM

Web3 teams often source talent through private groups, spreadsheets and personal introductions. Pricing is difficult to compare, provider credibility varies, and work is managed across disconnected tools. Providers with genuine skills or audiences may also lack a consistent source of qualified clients.

03 / THE SOLUTION

Baron Web3 provides project publishing, provider discovery, service listings, proposals, order management, reviews, verification and reporting. A pre-launch project hub allows emerging teams to present their work and hire services without the platform selling tokens, collecting presale funds or endorsing investments.

04 / MARKETPLACE PARTICIPANTS

Founders and project teams; marketing agencies; creators and influencers; Telegram and Discord communities; developers; auditors; designers; consultants; and verified Web3 companies.

05 / BUSINESS MODEL

Diversified revenue may include transaction fees, provider subscriptions, featured visibility, verification services, managed campaigns, analytics, advertising and future AI products. Proposed rates remain subject to market testing, payment costs and jurisdictional requirements.

06 / DEVELOPMENT ROADMAP

Foundation and core architecture are established. Current work focuses on MVP integration and testing. Planned stages include stronger discovery, collaboration tools, trust and safety, compliant payments, analytics, AI-assisted matching and global expansion.

07 / TRUST AND SAFETY

Verification, verified reviews, reporting, moderation, secure account controls and documented disputes are central to the product. Marketplace listings are not investment endorsements, and restricted services or misleading claims are prohibited.
